MITYBILT

MityBilt Products Inc. is an established business.

With almost 20 years of experience, MityBilt is known as a company that is dedicated to both its current and future clients. Our aim is to provide the highest quality customer service exceeding the industry expectations. MityBilt's steady growth over the past years has come with a reputation of a high quality product, a hardworking team and customer satisfaction.

MityBilt provides the solution to your furniture requirements.

We deal in both the Institutional and Office settings; including libraries, colleges, halls, sports facilities and other areas that call for 'hard-working' furniture. Our experienced sales staff will work closely with you ensuring that you receive the most appropriate furniture for your environment. Through our long term relationships with our clients, we have a clear understanding of your expectations and requests.

With MityBilt, you're the ultimate designer.

We make the recommendations but you make the call – choosing the laminates, the edging and leg colours to make your selection complete. We will work with you beyond the options offered giving you the ability to create your furniture for your classroom. When we say 'custom' we mean it. Your table is built for you, and we don't start manufacturing until we receive your order. From that point on your job is tracked by your name; every employee knows they are building furniture for you.

At MityBilt our sales reps and workshop team...

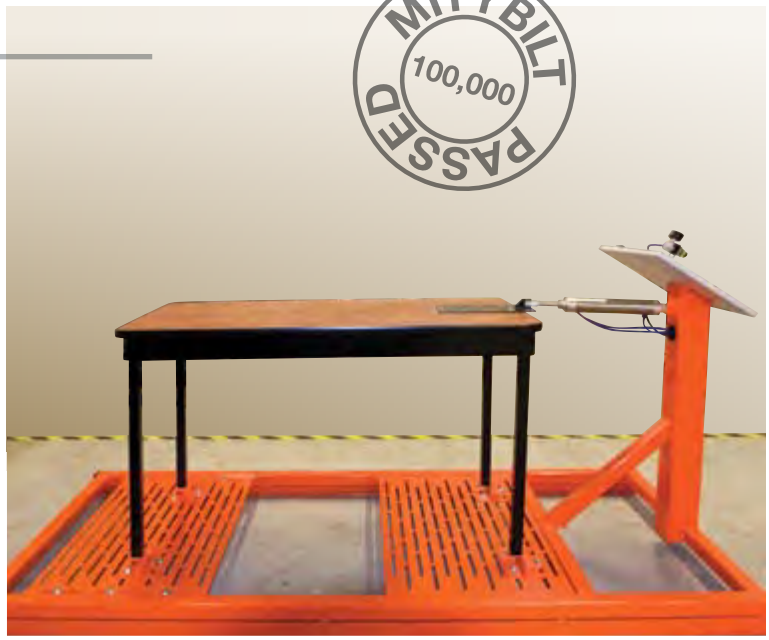
have been extensively trained, and work with the leading-edge technology enabling us to provide you with a quality service and product.

Risk Assessment & Product Testing

MityBilt has confidence that every table it manufactures will perform beyond the demands of real world situations. An in-house test facility subjects our tables and components to extreme forces for hours on end to make certain our products will exceed your expectations. Many tests are carried out on our products during both development and production. Any proposed changes to the product or to the production method is reviewed by MityBilt to decide whether additional risk assessment testing is required.

MityBilt uses a third-party accredited test laboratory to perform certain complex testing and to keep up to date with current test requirements and legislation.

MityBilt structural table testing exceeds the demands of ANSI-BIFMA and CGSB.



Eco-Care Outlook

At MityBilt we think twice about what we do and how we do it. While our aim is to become your preferred table provider, we don't want to sacrifice the environment to achieve this. We take the responsible view that it's on all of us to play our part in conserving the Earth's resources and to prevent damage to the environment around us.

The MityBilt environmental policy proves itself in three key areas:

- **Sourcing environmental preferable materials**
- **Eco-friendly manufacturing practices**
- **Recycling of waste material**

Using material from eco-sustainable sources, including a guaranteed recycled content, green-guard laminates, low formaldehyde emission core materials, water based adhesives and paint finishes containing no Volatile Organic Compounds (VOCs), all reduce the Carbon Footprint of our products. Unavoidable manufacturing waste is recycled wherever possible.

Effective care for the environment involves working with others; it needs everyone to aim for the same goal. We want to work with you and your clients to provide responsible solutions for their furniture needs, and to minimize the impact on the environment.

SYSTEMSTOR

What is it?

SystemSTOR is an adaptable, flexible, high-quality storage system that is used in education and office to home storage. Either in fixed or mobile units the trays are perfect to make the best use of space keeping your areas efficient, effective and looking good too.

Trays are available in 5 colours and sizes. Injection molded clips fasten the lid to the tray keeping contents safe and allows for the trays to be securely stacked. Smooth internal surfaces for easy cleaning. Storage units available in metal or wood with optional casters. Optional tray inserts are also available to help maximize organization. See page 21.

What makes SystemSTOR trays different?

Glide & Tilt Tray Design

A pioneering design, the 'Glide & Tilt™ Runner Module' with integrated 'Arrestor & Tilt' feature holds the tray in an angled open position making easy access and clear display of the tray contents. The Glide & Tilt™ Tray Runner Module (Arrestor & Tilt) feature allows the tray to stop in the open position without falling out of the storage unit and yet by a simple maneuver the tray can be easily withdrawn from the unit.

There is no limit to the combinations of trays that can be used within any storage unit. Molded from 'Super Tuff' ABS for strength and durability; designed to suit both Standard Width (SW) and Extra Wide (EW) in Single, Double, and Quad depths.

Educational Furniture

SYSTEMSTOR

The Benefits

The front of each tray is supplied with a transparent clip-on ticket window. This allows name cards to be easily displayed, yet only a second away from being changed.

At the end of the tray is an 'easy peel' stippled label area. Stippled makes it 30% less adhesive meaning you no longer have to pick the label off in hundreds of pieces; it comes off quicker than it went on.

Shatter Proof

All SystemSTOR trays are manufactured from High Impact Polystyrene (HIPS) which is proven to be 8 times stronger than other trays manufactured from Talc filled Polypropylene (TFPP). 'HIPS' is a toughened grade of plastic giving excellent strength and wear characteristics and shatter-proof for safety.

Specifications

Wooden Storage Unit

Ideal for primary and secondary schools as integrated storage equipment.

- All units supplied complete with trays of sizes and colours of your choice ready for immediate use.
- Constructed from 3/4” high quality, high performance thermally fused Maple laminated particleboard and edged with matching 3mm edge band.
- The units provide a continuous work surface; either on their own or when located together.
- Unit option of either fixed or mobile with heavy duty locking casters.
- Ships fully assembled.

Metal Storage Unit

Ideal for all educational grades and very popular in laboratory store rooms.

- Constructed from 1” 16 gauge mild steel. Finished in a durable powder coat finish for the sake of the environment.
- All units come with a steel folded shelf on top complete with rounded corners for user safety.
- Unit option of either fixed or mobile with heavy duty locking casters.
- A choice of red, green, black, ivory, yellow, silver, navy and more frame and shelf colours.
- All units are supplied complete with trays of your choice, ready for immediate use
- Ships fully assembled for immediate use

SystemSTOR Trays

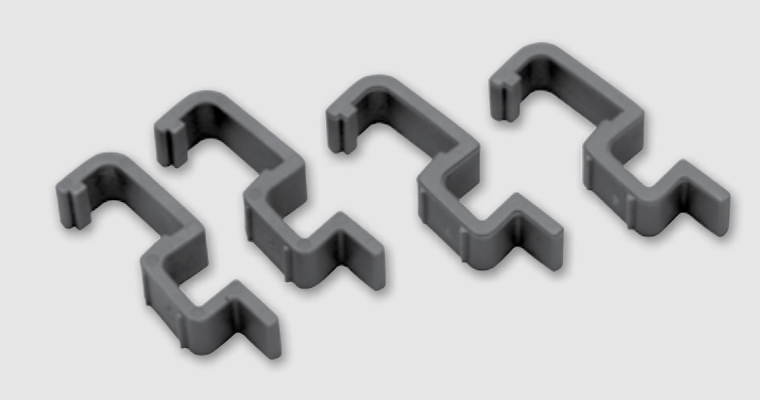
Tray Lid Clips

Keep your lids securely on the trays with these simple snap on clips. Four recommended per lid.



A B C D E

Tray Inserts

Five different types of 'tray inserts' are available; any two inserts can fit into the single width trays. Inserts are injection moulded for strength, and are designed for use as a stand-alone item outside the stor tray as well as for use within.

Combining the plastic stor tray with stor tray lids and security clips make a totally secure storage container, which eliminates products from becoming mixed up. This system allows for storage of the huge number of resource items used thoughout your school.

- **A** **Single Division Stortray Insert**
- **B** **Double Division Stortray Insert**
- **C** **Triple Division Long Stortray Insert**
- **D** **Triple Division Stortray Insert**
- **E** **Quadruple Division Stortray Insert**

Casters

Heavy duty braked casters with 60 mm wheels for easy maneuvering.

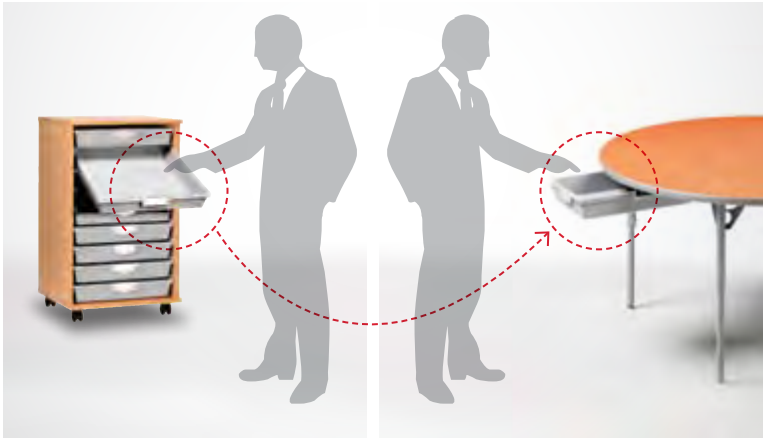
- **A** **Wooden Unit Caster**
- **B** **Metal Unit Caster**

Educational Furniture

SYSTEMSTOR

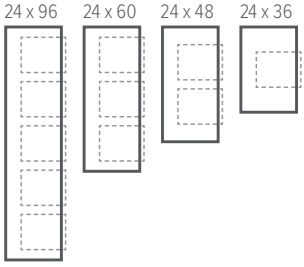
Trays Under Tables

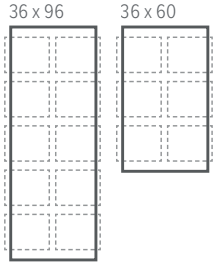
Use Stor Trays anywhere. Get storage trays on the underside of the table, and a mobile SystemSTOR unit for maximum organization and security. Take the trays out of the unit and slide them under the tables. At the end of class, collect up the trays and put them back into the unit keeping all materials safely in one area. It's simple and your classroom deserves it.

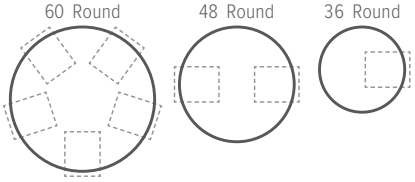


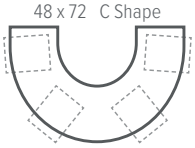
Tray and Mounting Hardware

Standard Width Trays Shown with Popular Table Sizes









Please note that tables have to be 36" wide to accommodate the double tray layout.

Educational Furniture

Aktivity

Making the Difference

Discover AKTIVITY. With all the coming and going, a busy classroom needs to multitask. The right layout can manage the activity. Size, shape, height and, of course, colour is important. Only Aktivity will plan your classroom with the children in mind.

- **A** 1” thick high quality particle board
- **B** High pressure scratch resistant laminate for longevity
- **C** Durable powdercoat finish; for the sake of the environment
- **D** Vinyl T-mold glued the entire way around for maximum security
- **E** Rounded corners for safety
- **F** Adjustable height legs 17-25” or 22-30”
- **G** Quiet simple glide
- **H** Laser cut support bracket for ultimate strength. Exclusive to MityBilt
- * LIMITED LIFETIME WARRANTY

Free Upgrade: No Tool Aktivity Leg

The new no tool adjustable leg allows the table height to be quickly and easily altered without the need of any tools. The screw style also allows for finer adjustments to accommodative a steady table even on uneven floors.

Available in adjustable height ranges of 17-25” or 22-30”

Did You Know?

MityBilt fastens its T-mold edging with a continuous bead of glue around the entire perimeter of the table? Typically, most manufactures fasten the T-mold at the join only.

Guided Reading Tables

Strategic Learning

Guided reading is a strategy that helps students become better readers. Although guided reading has been traditionally associated with primary grades it can be modified and used successfully in all grade levels. When the proper books are selected, students are able to read with approximately 90% accuracy. This enables the students to enjoy the story to its fullest capacity learning how to make meaning from print.

Conekt

A Flexible Environment

The concept of collaborative learning, the grouping and pairing of students for the purpose of achieving an academic goal, has been widely researched and advocated. The term “collaborative learning” refers to an instruction method in which students at various performance levels work together in small groups toward a common goal. The students are responsible for one another’s learning as well as their own. Thus, the success of one student helps other students to be successful.

The active exchange of ideas within small groups not only increases interest among the participants but also promotes critical thinking.

- **A** **1” thick 45 lb. particle board**
- **B** **High pressure scratch resistant laminate for longevity**
- **C** **Durable powdercoat finish; for the sake of the environment**

Educational Furniture

Conekt Linx

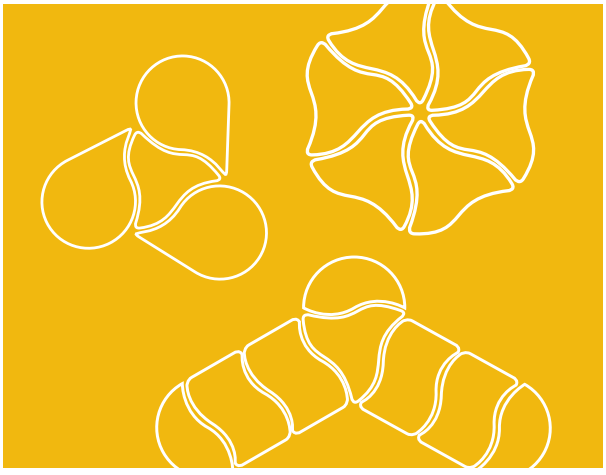
Discover Creativity, Discover Conekt Linx.

What is Conekt Linx? Conekt Linx is a range of 5 different shapes that all work together or on their own. This is more than just pushing two SURFs together or three QUAVERs. Grab a handful of everything... one NEXUS, four EKOs, one QUAVER, five RAINs and three SURFs; roll them together and watch them link with each other! It's amazing. Do it.

Get creative for endless possibilities! What configurations can you think of?

Optional Upgrade

Get two casters per table for easy moving. The principle is similar to that of a wheelbarrow; simply lift one end and roll them together.



Educational Furniture

Conekt Linx

Collaborative Learning Tables

Eko

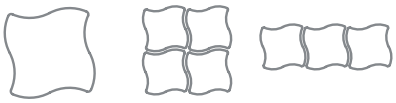
Round off the group with an Eko. This shape goes anywhere. Or put them together to form a small discussion area. Foreground table shown in Fresh Kiwi laminate and edge against Fresh Blueberry laminate and edge both with Black Espire legs.

Part #	Size (in.)	Lbs.
EEKO	24 x 48	50

Quaver

Add the Quaver and give a modern touch to your room. Seats 4-8. Shown in Fresh Lemon laminate with Black Espire legs.

Part #	Size (in.)	Lbs.
EQUAVER	54 x 54	98



Nexus

Quickly change the angle of your configuration with the Nexus. Foreground table shown in Fresh Pomegranate laminate and edge against Fresh Plum laminate and edge both with Black Espire legs.

Part #	Size (in.)	Lbs.
ENEXUS	48 dia.	50

Educational Furniture

Conekt Linx

Discover Creativity, Discover Conekt Linx.

Promoting group work from the start. This allows students to develop problem solving, interpersonal, presentational and communication skills, all beneficial to life outside of the classroom. These skills are near unachievable in an isolated environment and require feedback and interaction with other individuals. **Think Conekt Linx. Think success.**

Surf

Throw in the Surf for that additional space. Works great by itself or amongst the rest of the range. Foreground table shown in Fresh Kiwi laminate against Fresh Blueberry with Silver edge and Espire legs.

Part #	Size (in.)	Lbs.
ESURF	30 x 48	54

Rain

On its own as a smaller group, or keep adding more to accommodate as many as required. We'll leave it to you. Shown in Fresh Tangerine laminate with Silver edge and Espire legs.

Educational Furniture

Fresh Colour Series

Fresh Colour Options

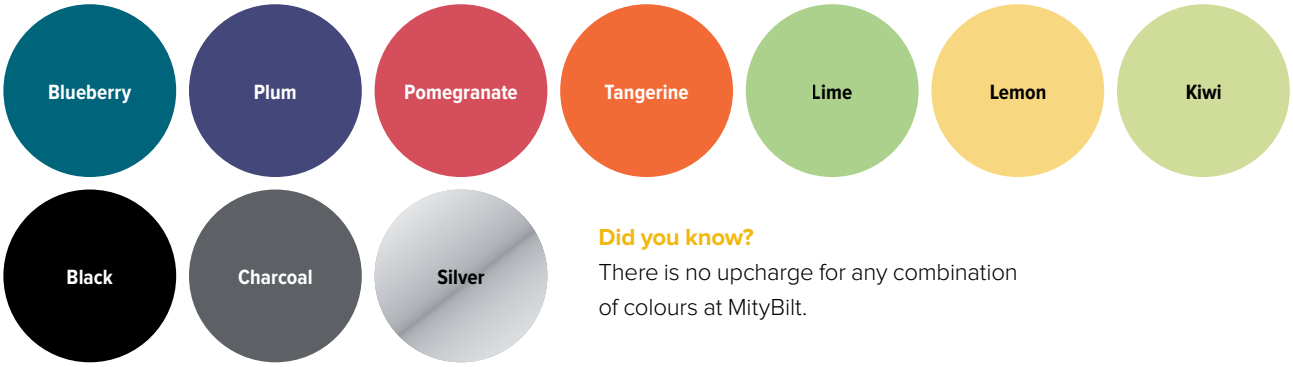
With MityBilt, you're the ultimate designer. We make the recommendations but you make the call; choosing the laminates, edging and leg colours to make your selection complete. **I Like it!**

Children learn and retain information longer when colour is used in educational material and in the classroom. Eighty percent of the brain receives information visually. Colour stimulates the visual sense and encourages the retention of information. Colour inspires creativity and encourages students in coming up with new ideas. The use of colour not only assists students in artistic projects, colour stimulates creativity thinking towards story writing and helps students to evaluate and solve questions.

High Pressure Laminate

(Notice that subtle wave pattern? It's there to help conceal those scratches that occur with good use.)

Vinyl T-Mold Edging / 3mm Edgeband



Did you know?

There is no upcharge for any combination of colours at MityBilt.

Bilingual Canada Map Table

This high quality custom designed educational table will certainly be the envy of every teacher across the country!

The unique and colourful Canada Map table takes advantage of the fact that geography is spatial, and provides a fun place for students to learn about the important areas of their country. Children learn best through engaging as a group and learning by doing. As students explore the Canada Map table, they build a permanent mental picture of their country and where important points are in relation to each other, and how they are connected. This high quality graphic printing is encapsulated in a high pressure laminate surface and is extremely resistant to everyday use.

USA Map Table

The USA Map table is designed and produced exclusively by MityBilt, be assured, you will find it no where else!

This table helps students learn their states, their capitals, major physical features, and important routes that establish connections between parts of the country. Students need more than a rote memorization of state names and capitals in order to make U.S. geography meaningful. They should have an understanding of where states are in relation to each other, and the physical characteristics of each region. Students need to have a permanent mental picture of their country in their heads, so that anything they learn about their country can immediately be related to a place. The MityBilt USA Map table does just that!

Educational Furniture
Ergonomic Seating

KUDOS
DESIGNED FOR SITTING

Feel the Difference

The number one reason for the development of the KUDOS was to provide an affordable classroom chair that meets criteria for 'Ergonomic Seating'. The Kudos is now setting new standards by introducing proven ergonomic principles into classroom chairs for today's educational environment.

- **A** **Flex-back technology for correct healthy posture**
- **B** **One piece molded seat shell for additional strength**
- **C** **Concealed seat fixings to eliminate weak points and seat cracking**
- **D** **Low set carrying handle for easy carrying**
- **E** **Available in 6 colours to suit your environment**
- **F** **Waterfall front edge to relieve pressure on lower back, increasing comfort.**
- **G** **Contour steel Frame supporting all areas of the seat**
- **H** **Fully MIG Welded for longevity**
- **I** **Environmentally friendly powdercoat finish**
- **J** **Silent floor glides – less class disturbance**
- * **LIMITED LIFETIME WARRANTY**
- * **NO ASSEMBLY REQUIRED**

Sitting right starts now, here's why:

- 60% of school children suffer back or neck problems from sitting in chairs not designed to be sat in!
- 20 billion dollars is spent in Canada per year on back problems
- 15 thousand hours are spent sitting by the time you leave school
- 2nd most common reason for absenteeism in the work place in Canada is due to bad backs

Children often tilt forward on the front legs of their chair when working at a table in attempt to get comfortable. This better seating position is found instinctively and without any instruction, but how do we reward them? By telling them to sit up straight and smarten up! Good for the health of the chair legs, disastrous for the health of the child. But in truth this 'tilt' approach is a better way to sit and a better way from which to rise back to a standing position.

Tipping forward to change the angle of the legs, back and spine is also a way that many people with back problems ease the pain they're suffering from. So if we're to learn from the instinctive experience of our children - and we want a better relationship between chair, desk or table and work position, shouldn't the furniture we provide in our classrooms provide a healthy posture?

The Kudos C2 two position chair does just that without jeopardizing the safety of the child or the strength of the chair.

Swivel Saddle Stool

The benefits of saddle stools have been recognized over many years and include:

- Comfort both when in use and after long periods of use. Saddle promotes a balanced and upright posture.
- Reduction in back pain.
- Saddle is mounted to a gas lift making it compatible with a wide range of work surface heights.
- Stores usefully under a desk or table.

The SADDLE can be used by young or old, by large or small as one size fits all. Unlike alternative designs, the Saddle is injection-moulded as a single component for simplicity, durability and low cost.

Educational Furniture
Posture

How do you sit?

Many of us spend a significant part of our lives sitting down, whether at school, college, in the office, working in a shop or other seated activities.

Most of us spend our seated time sitting in a way that can lead to stiffness, a sore neck and, in some cases (especially those of young children) back problems that last a lifetime.

Many of these problems can be linked to poor posture in the form of rounded shoulders, a cramped stomach and constant twisting of the trunk. Classic examples of this are clearly illustrated in the photographs taken in a typical classroom (top right). A lesson spent with their bodies unwittingly forced into the hunched position adopted by everyone shown... Hardly surprising we're stiff, aching and tired after an exam, lesson or day sat at our office desk!

While reading this, you may yourself be hunched with your spine curved, leading you to constantly shift position because you too are uncomfortable...

Your posture when using the MityBilt Ergo chair and desk.

Good posture brings benefits such as improved concentration, reduced discomfort and most importantly proven better achievements in learning and in the workplace.

The Ergo Chair can be used can be used for a range of applications in commercial and in educational environments, especially where long periods of sitting are the norm.

See page 67 for Ergo Chair product info.

See page 45 for Ergo Desk product info.

Educational Furniture
Posture

The Sitting Up Straight Problem

Figure 1

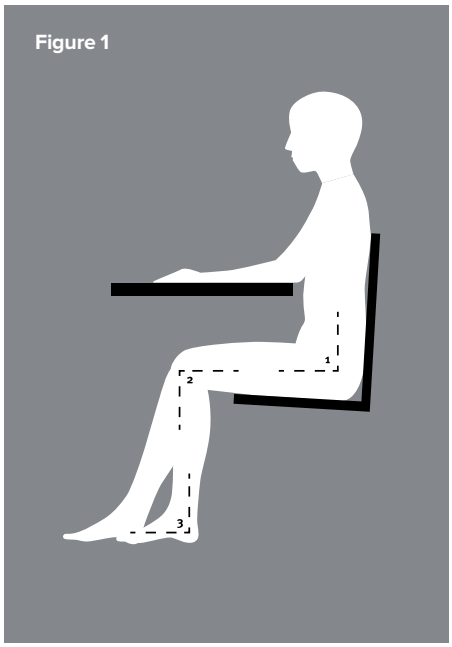

Figure 2

Right angles means wrong ways.

In most of our schools, current best practice is to encourage children to sit in the most upright position they can manage. Let's call it the 'three right angles' approach. Here's how it goes: back straight, head up, look forward.

1. Seat flat, with thighs at 90° to the spine to make the first right angle.
2. Knees bent at 90° to keep your lower legs straight – making the second right angle.
3. And finally, feet bent at the ankle another 90° so they rest flat on the floor, making the third right angle.

And to help us to "sit up straight", we're usually given flat or backward sloping seats with vertical backs and flat tables that we tuck our legs under. Take a look at the relationship between **Figure 1** and the all too familiar **Figure 2**.

Fine if your body is alert and you need to look straight ahead for a short while. But what happens if you need to read or write? You have to bend forward over the table to get your eyes in the right position, placing your head in an awkward position, curving your spine, imposing unnecessary pressure on the discs in your back and flopping your arms across the table. And this "slump" goes on hour after hour, day after day, year after year in our schools. So in creating 'three right angles', we've encouraged completely the wrong way to sit.

It's a tragedy that common sense tells us to rearrange our bodies out of the "upright" sitting position we've been given into a new and thoroughly damaging way of sitting and working. So isn't it time we did something about it?

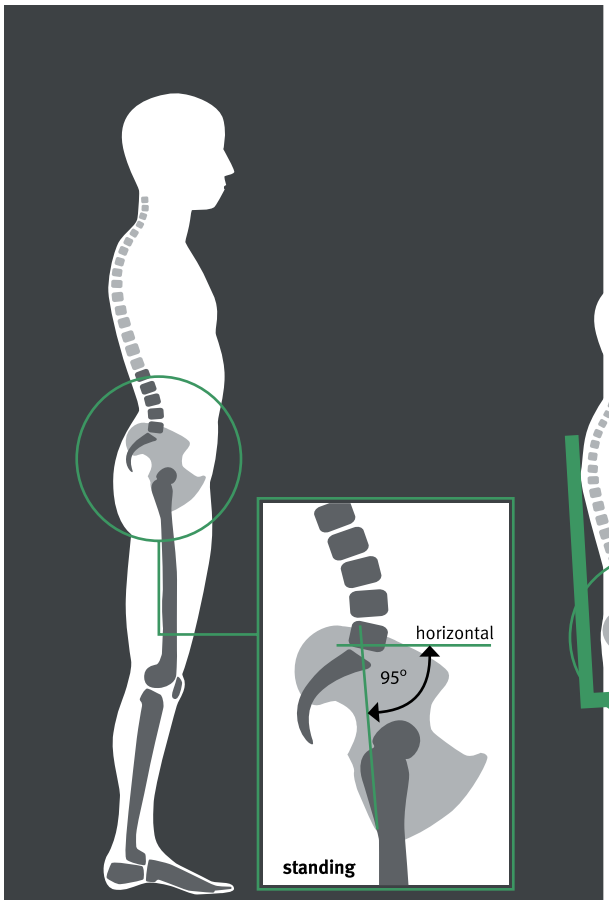
Fortunately for teachers and education administrators, the back problems caused by such an unnatural and unhealthy sitting position don't tend to appear until we are between the ages of 13 and 16 and worsen in the years after we've left school. Otherwise we could insist that our schools and education service take greater responsibility for the potential long-term damage they do to our bodies by not furnishing our classrooms with suitable furniture.

Educational Furniture
Posture

The Sitting Up Straight Problem

An explanation of how conventional seating can damage the lower spine.

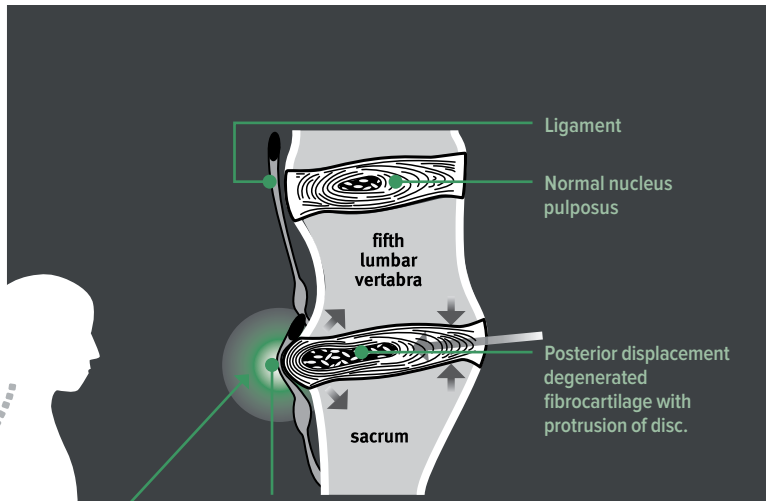
Standing
When standing upright, the base of the spine is curved (left). This is referred to as the lumbar curve. When we are forced to adopt the three right angles seating position (right) the base of the lumbar curve flattens.



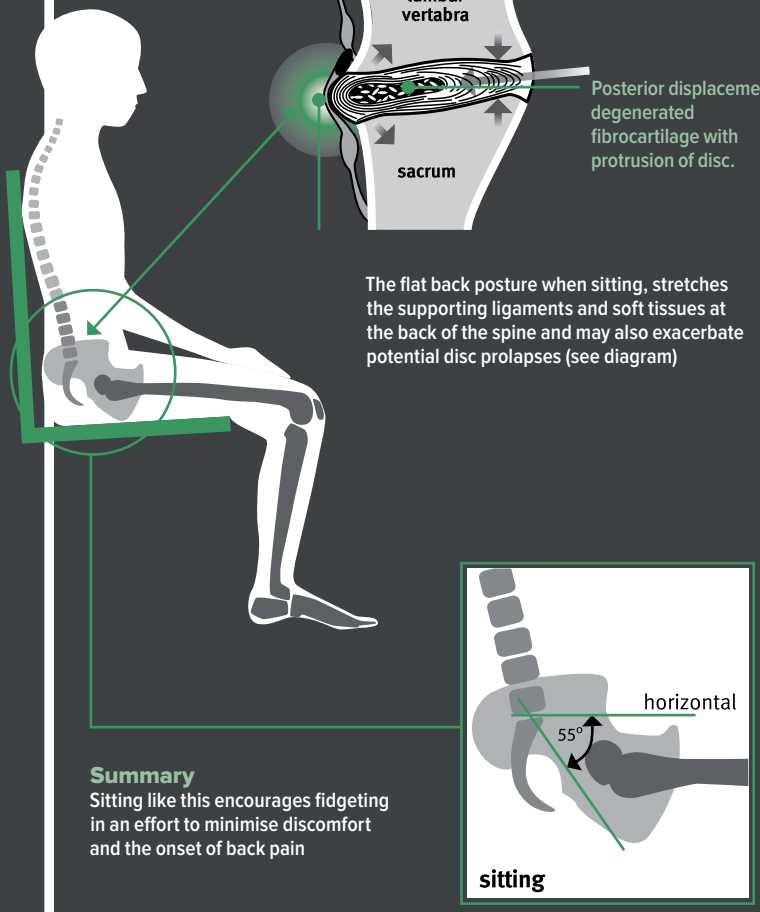
Summary
Standing upright results in transferring weight forward onto the discs.

Right Angle Sitting Position
This can result in discomfort or – as we are becoming more sedentary – permanent damage.

Here's why...



The flat back posture when sitting, stretches the supporting ligaments and soft tissues at the back of the spine and may also exacerbate potential disc prolapses (see diagram)



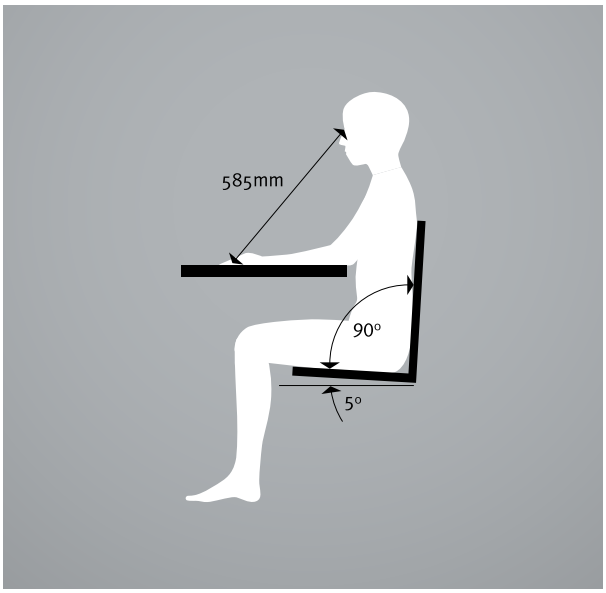
Summary
Sitting like this encourages fidgeting in an effort to minimise discomfort and the onset of back pain

Educational Furniture
Posture

Posture is Everything

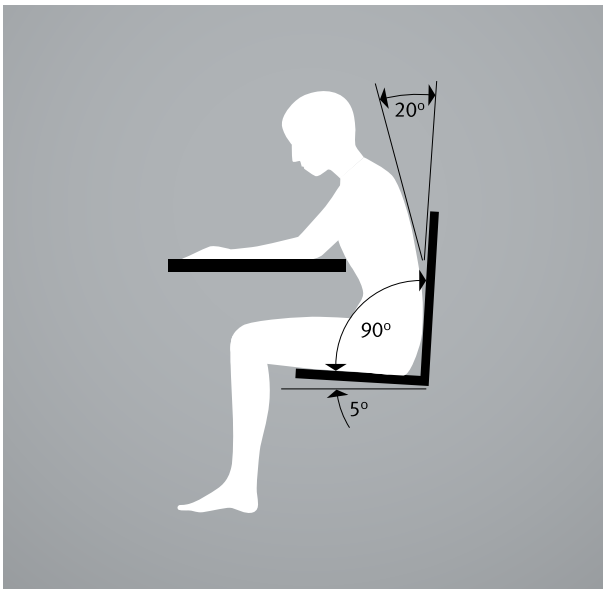
The 'Right angles' sitting position (top)

Principally, the right-angled sitting position is a backwards-inclined resting position. Eyes are a long way from the book. So you have to bend your neck into an unnatural position loads both the hip joints and the lumbar region in extreme positions. It's neither a natural nor a comfortable way to sit for any length of time.



Working from the 'Right Angles' position (middle)

As soon as you begin reading or writing, your eyes need to be brought closer to the work you are doing. To do so, you bend the lumber region; typically the bending is localized in the 3rd, 4th, and 5th discs because the rest of the back is pretty inflexible. Even with a limited bend, muscles, joints and ligaments are overstretched and the back begins to round. There's also backwards pressure on the lower discs, and to make things more awkward, the extreme flexion of the neck is a very tiring position to hold for any length of time.



Round back, cut legs (bottom)

To avoid rounding our backs, most of us move to the front of the seat, so that our thighs slope about 20 degrees below the horizontal. By bending our necks, we can bring our head down closer to the work we're doing. But in doing so, the front edge of the seat cuts into the muscles of the thighs and restricts the flow of blood to the legs. The hip can flex comfortably to around 60 degrees before the normal lumbar curve starts to flatten, which then increases the loading on the disc and stretches the adjacent supporting muscles and ligaments. After a while, we end up with a sore back and numbness in the legs.
